

# Simplifying network security solutions for today's connected consumer

Security or fast innovation: is one more important than the other? What if there was a platform that delivers both to your customers without compromising user experience or requiring you to invest in tedious, complex projects?

## Security with innovation in mind

Close the gaps in home network security. Our seamless software solution integrates with any new or existing routers and provides best-in-class security controls, API infrastructure, and end-to-end lifecycle management — all without impacting performance or internet speed.

seconds: the time it takes SAM to identify and protect a new device that enters the network

of supported router models from a wide variety of vendors

of all home devices are smart devices

# Say hello to SAM Secure Home

A complete home network and IoT security layer that provides device management and tools to control content for users at home or on the go. It protects IoT devices against exploits targeting exposed interfaces and blocks malicious payloads.

Using data collected by SAM's network agent, SAM Secure Home identifies abnormal activities and aggregates security events per device or network.

**Stand out in the market by connecting security management and value-added services for your customers.**

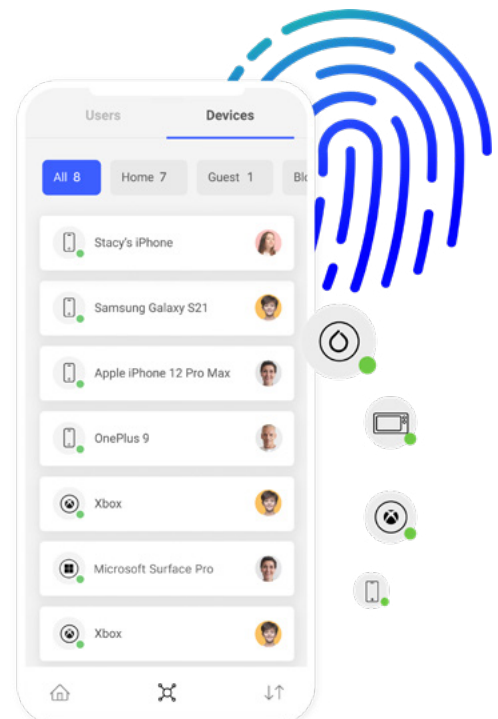

## Device Identification

Allow users to view, manage, and control all devices connecting to their network.

Users of popular home IoT networks, such as Amazon Sidewalk or Google Nest Hub, can now keep track of bandwidth usage and optimize signal strength.

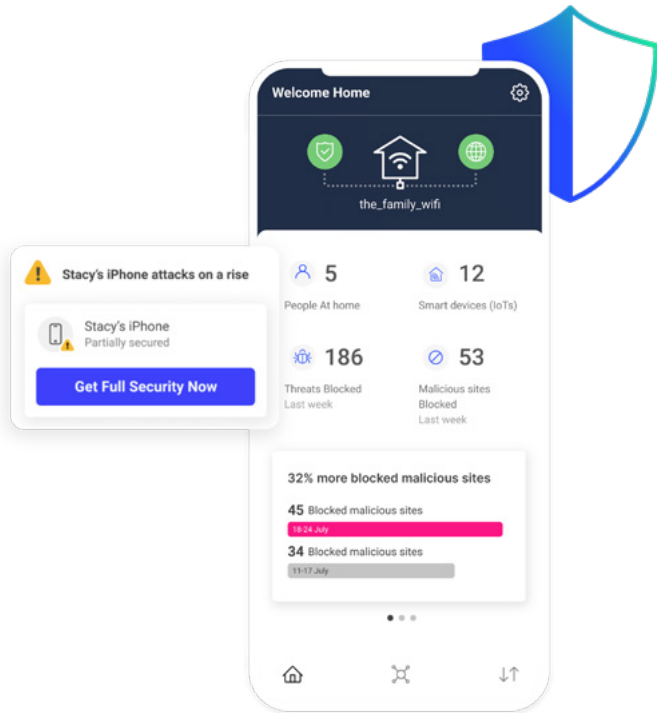

- Network map to display all network-connected devices
- Real-time notifications when a new device joins or leaves the network
- Device connection status
- Bandwidth consumption report
- Home and guest network zones

# Security Suite

Seamlessly protect users' privacy and personal assets across all devices, while ensuring service availability and personalized user-experience.

Prevent users from falling victim to malicious websites and a range of widespread attacks, including service disruption. If a device becomes infected, SAM will automatically isolate it from other devices in the network, and will block this attack across all devices of the same type.

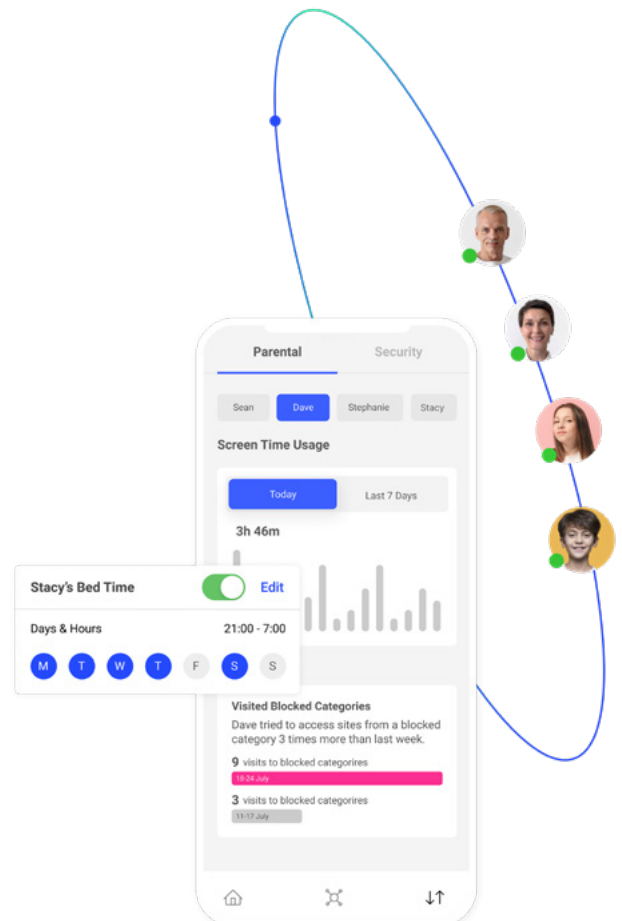

- Router, network and IoT protection
- Protection against zero-day attacks
- Safe Browsing
- Virtual patching of device or router vulnerabilities
- Prevention of attacks' spreading
- Mobile Security

# Family Digital Control

Enable users to limit web access for specific devices through a set of customizable control features.

Help make the internet a safer place for families. Filter out inappropriate or harmful content on apps and networks of your choice and choose when family members can be online using presets for age groups.

- Internet pausing, safe search, app control and content filtering
- Time limits and schedule settings
- Customized settings according to user profiles

# SAM's unique positioning

A security and management solution with no impact on performance or user experience

SAM delivers the quickest time to market for CPE-based network security.

Our seamless solution provides inbuilt technical support and leads to increased customer satisfaction.

Our unique, patented technology was developed for real-time attack prevention. Unlike other security providers that only detect attacks, our holistic solution stops attacks before.

We're proudly integrated with all leading, new or legacy, router models and can run on any Linux-based platform.

Our big-data analytics enables you to learn more about your customer base and understand their behavior, so you can effectively drive revenue growth.

**“Great product, great app...  
right product at the right time!”**
