

VITA

The ISP-Provided Security Solution for Homes

An instant out-of-the-box security experience

Easy automatic onboarding

A “No-touch” identification & mapping of devices connected to the network – no software installation or configuration needed.

Always-on protection

An ongoing network and connected devices defensive layer – shielding against external and internal cybersecurity threats.

Tech jargon? Not in this house

Whether everything’s great, or there’s a problem, the customer is informed and quickly understands what’s happening within their network.

Creating a safe digital environment

All users are protected from accessing harmful websites, and implementing additional per-device destinations blocking or device usage limits is done in seconds.

Here’s how VITA protects their digital life

Discovery & Identification

Using multiple indicators, we automatically identify the devices connected to the home network (including IoT).

Router Protection

Our router-based agent constantly protects against attacks on the router from outside & inside the home network.

Network Protection

We monitor the home network’s behavior for any abnormal & malicious activity & instantly alert & deal with the issue.

Device Protection

We pay special attention to IoT devices on the network, protecting them against known vulnerabilities & preventing devices from being used in attacks.

Parental Controls & Content Filtering

We enable the network owner to set up custom per-device usage limits, & block access to content & services outside the network.

Combining multiple coverage vectors to holistically shield the digital home

Router Protection

- Router Hardening
- Deception
- Virtual Hot Patching
- Wi-Fi Password Protection

Device Protection

- Adaptive & Dynamic Firewall
- DPI Engine
- Anti Malware*
- OS Update Notification*

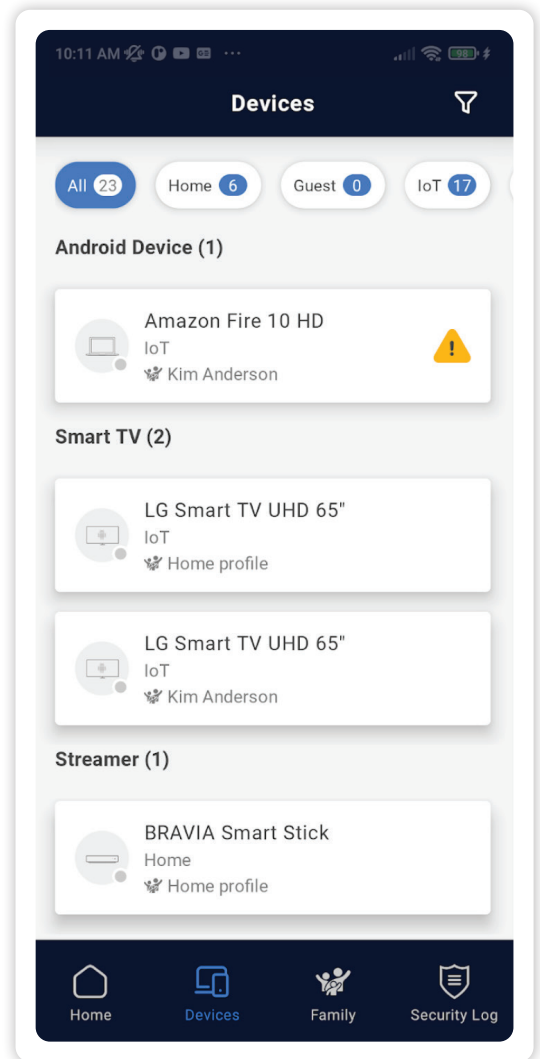

Network Protection

- Anti DoS/DDoS
- Brute Force Protection
- Port Scan Protection
- Anti-Spoofing (MITM)*

Safe Content Environment

- Safe Browsing
- Category Filtering
- Service Filtering

Here's what you can gain when you offer SAM VITA to your customers

- ✓ **New Revenue Stream**
Offer VITA as a stand-alone or a bundled service for your target customer segment.
- ✓ **Differentiate & Reduce Churn**
Acquire new subscribers & retain existing ones by providing security where it counts most – inside their home network.
- ✓ **Carrier Network Protection**
VITA's Router Protection stops outbound threats from customers' networks from entering & utilizing the ISP's network.
- ✓ **Fastest Time-To-Market**
Easy integration with ANY Linux-based router + Fast cloud-to-router agent deployment = The shortest path from decision to activation.
